RE: Life Saving HVAC System

Dear Harry:

I wanted to thank you for your life saving insulation and HVAC design. My daughter left her car running in our garage overnight while celebrating a friend's birthday. Thankfully, our house is "tight" enough that carbon monoxide did not enter the house, and everyone was safe. The fire department wore masks and safety gear after the garage door entering the house had been opened and CO levels rose above safe levels. We avoided a tragedy based on your excellent system design.

When Covid began we slept better knowing the cutting-edge UV light filtration was scrubbing the air long before we encountered the pandemic. Thank you for creating such a safe home, Harry. Words cannot capture our gratitude.

Warmly,

L. Russell Ranson, III
